- Problem Solving
- Time management
- Fast Learner
- Collaboration

EDUCATION

BA in Computer Science

2018 - 2022

LANGUAGES

English   Amharic

PROFILE

I am a passionate developer specializing in crafting dynamic and responsive web applications as well as native applications using the power of React and TypeScript. My top priority is delivering seamless user experiences, and I have a strong track record of success across various projects. I am committed to consistently producing exceptional code and developing creative solutions that enhance user engagement and contribute to business growth.

WORK EXPERIENCE

Frontend Developer

Jaktech Engineering and Trading   Aug 2022 - Present

Some projects that i worked on at Jaktech

- **Damagames** : Is a captivating Progressive Web App (PWA) centered around a checkers game. This project showcases an array of engaging features, including options for both computer and multiplayer gameplay, an in-game shop for acquiring virtual items with integrated telebirr, an integrated scoreboard, and competitive leagues.

My responsibilities covered planning and building the user interface, including the admin site and real-time communication via sockets. This experience showcased my ability to create engaging PWAs with collaborative technologies.

Tech and Languages used :
React with Typescript, Socket IO, Tailwind CSS, Jest + React Testing Library, Laravel, MySQL, Material UI ...

Freelance - 2022

- **Exam Time** : is a React Native mobile application designed to assist national exam-taking students,. This project was developed to streamline and enhance the preparation process for these critical examinations.The tests simulate the format and difficulty level of the national exams, allowing students to practice and refine their skills.

My responsibilities encompassed the end-to-end delivery of the project, encompassing everything from project planning to coding, testing, debugging, and deployment. As the front-end React Native developer responsible for building the app in close collaboration with various team members, including designers, stakeholders, and back-end developers.

Tech and Languages used :
TypeScript, React Native, Jest, and React Test Renderer, ensuring robust, maintainable, and efficient code. Realm DB is employed for online data storage and retrieval, enabling a seamless and responsive user experience.

⭐ Other projects include an admin site for a ecommerce wesites, different landing pages and others.
